
Symmetric matrix**P61473_en**

Write a function that, given a square matrix m , tells if it is symmetric or not.

Remember that a matrix m is symmetric if $m_{i,j} = m_{j,i}$ for any i and for any j .

Precondition

m is a square matrix $n \times n$ with $n \geq 0$.

Interface

C++	typedef vector< vector<int> > Matrix; bool <i>is_symmetric</i> (const Matrix& <i>m</i>);
Java	public static boolean <i>isSymmetric</i> (int [][] <i>m</i>);
Python	<i>is_symmetric</i> (<i>m</i>) # returns bool <i>is_symmetric</i> (<i>m</i> : list) \rightarrow bool
